

# AirPlus Green Reports. Your optimal database for purposeful climate protection.

**AIRPLUS.** WHAT TRAVEL PAYMENT IS ALL ABOUT.

Climate protection, particularly when it comes to business travel, is playing an increasingly important role. More and more companies have undertaken to comply with precise targets to reduce or compensate for emissions caused by their business travel. To this end, they need reliable data to calculate CO<sub>2</sub> emissions so they can concentrate on environmental protection activities.

## AirPlus Green Reports – emissions at a glance

AirPlus Green Reports deliver detailed and transparent analyses for business-related flights – the optimal database to use when compiling your emission balance reports. The emissions are calculated automatically for every flight paid with the AirPlus Company Account.

### Calculation methods accepted worldwide

To calculate emissions generated through business travel, AirPlus uses the emission calculator developed by the non-profit climate protection organization atmosfair and approved by the German Environmental Agency. The high quality of the calculation methods applied by atmosfair (VDR, DEFRA, VFU and ICAO) is regularly verified through independent studies and serves as a reliable basis for your contribution to environmental protection. AirPlus Green Reports also comply with the CO<sub>2</sub> reporting standards of the VDR (Verband Deutsches Reisemanagement) – The German Business Travel Association.

### Useful information for your sustainability reports

AirPlus Green Reports deliver relevant figures for your in-depth evaluations: Which routes generate the most CO<sub>2</sub> emissions? Which projects, cost centers or departments can they be allocated to? CSR and travel managers rely on AirPlus Green Reports for precise answers to these and other questions. AirPlus provides you with documentation containing the calculated values set out in table form. In addition, you receive management summaries to facilitate your review of key emission-related figures. The itemized database allows for easy allocation of emissions to individual generators, including by department, cost center or project number. Moreover, you can generate geographical statistics for the top 10 city pairs, as well as the average costs per 100 kilometers travelled, across short, medium and long distance sectors.

## Your advantages at a glance

- > clearly structured, detailed emission reports
- > a management summary for a clear review of key figures
- > scientifically founded calculation methods developed by atmosfair in line with international standards
- > user-based allocation of emissions through additional data
- > no extra effort for your company's staff or external partners
- > the optimal database for tracking your environmental protection activities

The clearly structured graphics facilitate analysis of business travel emissions.

#### Detailed, transparent data

In addition to carbon dioxide (CO<sub>2</sub>) emissions, the data provided encompasses the Radiative Forcing Index (RFI) which includes other harmful emissions such as nitrogen oxides (NO<sub>x</sub>).

#### No extra effort

AirPlus Green Reports create balance reports of the emissions caused by your business-related flights – automatically and without any extra effort required, since you no longer need to enter your travel data manually. AirPlus supports your climate protection activities and voluntary contributions to climate protection projects.
